O*NET ANALYST RATINGS OF OCCUPATIONAL ABILITIES: ANALYSIS CYCLE 20 RESULTS

Introduction

The Occupational Information Network (O*NET) is a comprehensive system developed by the U.S. Department of Labor that provides information for over 1,100 occupations within the U.S. economy. This information is maintained in a comprehensive database that was developed to replace the Dictionary of Occupational Titles (DOT) (U.S. Department of Labor, 1991). In order to keep the database current, the National Center for O*NET Development is involved in a continual data collection process aimed at identifying and maintaining current information on the characteristics of workers and jobs. The information that populates the O*NET database is collected from three primary sources: incumbents, occupational experts, and occupational analysts. Targeted job incumbents provide ratings on occupational tasks, generalized work activities (GWAs), knowledge, education and training, work styles, and work context (WC) areas. Importance and level information regarding the abilities and skills associated with these occupations is being collected from occupational analysts. It should be noted that there are theoretical or philosophical reasons for preferring one rater group to the other for collecting different types of data. For example, incumbents are generally more familiar with the day-to-day duties of their job; therefore, they are the best source of information regarding tasks and GWAs. In contrast, it is likely that trained analysts understand the ability and skill constructs better than incumbents and therefore should provide the ability and skill data (Tsacoumis, 2007). Granted, it is imperative that the occupational analysts have detailed occupation information in order to rate the ability and skill constructs. It has also been suggested that some incumbents deliberately inflate their ratings to influence policy decisions regarding, for example, compensation and training (Morgeson, Delaney-Klinger, Mayfield, Ferrara, & Campion, 2004). Given these considerations, occupational analysts as opposed to incumbents provide the ability and skill information in the O*NET database.

This report focuses on results pertaining to the ability ratings only. Abilities are "... relatively enduring attributes of an individual's capability for performing a particular range of different tasks" (Fleishman, Costanza, & Marshall-Mies, 1999, p. 175). Abilities are sometimes referred to as traits as they tend to remain stable over long periods. The 52 O*NET abilities cover performance applicable to a broad range of jobs in the world's economy and are grouped into four categories within the O*NET content model: cognitive, psychomotor, physical, and sensory-perceptual.

To facilitate the ability rating process, occupational analysts are provided relevant occupational information. Trained occupational analysts are responsible for rating the importance and level of the 52 abilities for each of the O*NET occupations. More specifically, eight trained occupational analysts provided ratings for each occupation. For a description of the entire analyst data collection process, including the preparation and distribution of the occupational data, the steps associated with the ratings process, and the collection and management of the ability ratings, see *O*NET Analyst Ratings of Occupational Abilities: Procedures Update* (Fleisher & Tsacoumis, 2012).

To ensure a controlled data collection and management process, occupational data are being collected in groups or "analysis cycles." This report describes the results from the data collection process for the 20th analysis cycle of 100 occupations. Reports describing each of the previous cycles are available at <http://www.onetcenter.org/research.html>. Results for subsequent cycles

will be reported in separate reports. For a description of the O*NET Data Collection Publication Schedule see <http://www.onetcenter.org/dataPublication.html>. Appendix A includes a listing of the IDI codes and Occupational Titles addressed in Cycle 20.

Evaluation of Cycle 20 Analyst Ratings

As mentioned above, occupational analysts provided ratings on the importance and level of the 52 abilities for each of the 100 occupations in Cycle 20. The mean, standard deviation, and standard error of the mean (SE_M) of the importance and level ratings were computed. These results are shown in Appendix B.

Four sets of analyses were performed to evaluate the ratings that occupational analysts provided. First, we focused on identifying the data that may be difficult to interpret based on limited agreement among raters or because there is an indication that the ability level rating is not relevant for a specific occupation. Thus, a set of recommended suppression criteria was established which flagged: (a) an ability level rating as not relevant to an occupation because of low importance ratings, (b) an ability with too little agreement in importance ratings across raters for a particular occupation, and (c) an ability with too little agreement in level ratings across raters for a particular occupation.

The remaining three sets of analyses focused on computing measures of interrater agreement and interrater reliability. Poor agreement as indicated by low reliability estimates may suggest that there is confusion about the constructs, potentially due to either the nature of the construct definition or rater training. Specifically, the second analysis involved estimating interrater agreement among the eight raters in each rating group. Next, the interrater reliability of the raters was computed to determine the extent to which raters agreed about the order of and relative distance between constructs on a particular scale (i.e., importance or level) within a particular occupation. That is, this analysis provides information regarding the consistency across raters in terms of how they rate the required level or relative importance of the 52 ability constructs to performance in a particular occupation. Finally, another interrater reliability estimate was computed to examine the consistency of ratings across occupations within constructs. In other words, this type of interrater reliability focused on the extent to which raters agree about the order of and relative distance between occupations on a particular scale for a particular construct.

Cycle 20 Recommended Data Flags

Three distinct criteria were established to flag the ability data. All three flags affect the presentation of data within the publicly available O*NET Online (online.onetcenter.org). First, the level rating of an ability was flagged as not relevant for a particular occupation if two or fewer of the eight occupational analysts rated its importance as two or greater. Thus, the level rating of an ability is considered not relevant when that construct is not important for performance in a particular occupation. For example, in the Cycle 20 data, the level ratings for Wrist-Finger Speed were considered not relevant for several occupations, ranging from Assessors (00091.03.1) to Archivists (00276.03.1), because Wrist-Finger Speed was not considered important for performance in these occupations. In this cycle, there were 1,206 not relevant flags (see Table 1 for the number of not relevant flags across the past 10 cycles). To facilitate interpretation of these results, it should be noted that there are 5,200 sets of ratings (100 occupations x 52 abilities) in the current cycle. Given this, 23.19% (1,205/5,200) of the ability ratings were flagged as not relevant. The average percentage of ability ratings flagged as not relevant across the previous 19 cycles is 19.13% ($SD = 5.36\%$); thus, the percentage of

ratings flagged in the current cycle is above the average across previous cycles. Generally, the abilities flagged as not relevant for a large number of occupations in Cycle 20 were also flagged as not relevant for a large number of occupations in previous cycles (e.g., Dynamic Flexibility, Night Vision, Peripheral Vision). Given that these constructs capture fairly specific physical or sensory capabilities intuitively not required for many occupations, these results are not surprising.

The remaining two criteria for flagging an ability for a particular occupation involve the recommended suppression of any ability importance or level mean rating that had an SE_M greater than 0.51. These criteria were established to capture those ratings deemed to have insufficient agreement across raters. The value of 0.51 was selected because $1.00/1.96 = 0.51$. An SE_M greater than 0.51 means that the upper and lower bounds of the confidence interval are more than one scale point away from the observed mean. There were no instances in Cycle 20 where the mean importance rating was flagged for insufficient agreement. In fact, no importance ratings received flags for an SE_M greater than 0.51 since Cycle 3. The results of the suppression criteria for level for the past 10 cycles (Cycles 11-20) are presented in Table 2. The only insufficient agreement flags for level ratings in Cycle 20 occurred for Multilimb Coordination and Dynamic Flexibility. The percentage of flags indicating insufficient agreement with level ratings in Cycle 20 was 0.04%, which is roughly the same as observed in Cycle 19 (0.04%).

Dating back to Cycle 1, a decreasing trend exists across cycles with respect to the percentage of flagged ability level ratings (see Tables 1 and 2 in Reeder & Tsacoumis, 2015 and Reeder & Tsacoumis, 2017 for summaries of flagged rating across Cycles 1-17). This pattern is particularly evident for the “not relevant” criterion, whereas the SE_M values may have reached a lower asymptote as it is difficult to consistently obtain rates lower than 0.05-0.15% of the ratings. Exceptions in which there have been increases in flagged ratings across the cycles (i.e., Cycles 7 and 11) have been relatively rare¹. The sharp increase in agreement observed in recent cycles could be attributable to the fact that most of the occupations rated have also been rated in a previous cycle (all but one of the occupations rated in Cycle 20 were repeat occupations), and slightly revised rating procedures were introduced to accommodate this large percentage of repeat occupations (Fleisher & Tsacoumis, 2012). These findings suggest there remains a high level of agreement among the occupational analysts. The detailed results of the recommended data flags and suppression criteria are depicted by the shaded cells in the results presented in Appendix B.

Cycle 20 Interrater Agreement

Interrater agreement was assessed to determine the level of absolute agreement among the occupational analysts in ratings within a construct for a particular occupation. Measures of interrater agreement index the extent to which the eight raters provided the same rating regarding the level of an ability (e.g., Written Comprehension) required to perform within a particular occupation. To examine agreement, we calculated the standard deviation (SD) of ratings across occupational analysts for a given construct and scale for each occupation and the SE_M of these ratings. For both indices, lower values indicate greater agreement, and vice versa.

¹ However, it should also be noted that the percentage of flags indicating insufficient agreement with level ratings in Cycle 11 was still less than 1%.

A summary of these results is shown in Appendix C. The columns labeled “Mean of M_s ” show the mean of the occupational analyst mean importance and level ratings across the 52 abilities for each occupation². The columns labeled “Median of SD_s ” show the median of the SD_s associated with each mean importance and level rating across the 52 abilities for each occupation. Finally, the columns labeled “Median of SE_M s” show the median of the SE_M s associated with each mean importance and level rating across the 52 abilities for each occupation.

The importance ratings across all occupations had a median SD of 0.35 and a median SE_M of 0.13. The level ratings across occupations also had a median SD of 0.35 and a median SE_M of 0.13. Similar to previous cycles, these results for both importance and level reveal strong agreement among the raters.

Cycle 20 Interrater Reliability: Across Constructs within Occupations

To examine the interrater reliability of the Cycle 20 ratings we calculated intraclass correlations ($ICC[C, k]$; McGraw & Wong, 1996) among the occupational analysts’ ratings to assess consistency across constructs within occupations. As mentioned previously, this statistic indicates the degree of the similarity in the rank ordering and relative distance between the abilities on a particular scale within an occupation. Our target level of interrater reliability is a median $ICC(C, k)$ of 0.80 or greater. The value of 0.80 is judged to be a good rule-of-thumb that has been used in multiple contexts, including O*NET (e.g., Clement, Chauvet, Philipp, & Ambrose, 2003; McCloy, Waugh, Medsker, Wall, Rivkin, & Lewis, 1999; Rase & Tognetti-Stuff, 1983).

The results of these analyses are presented in Appendix D. The results revealed high levels of interrater reliability across the 100 Cycle 20 occupations. Specifically, the median ICC for importance ratings for the abilities across the occupations was 0.98 ($M = 0.98$, $SD = 0.02$). The median ICC for the level ratings was 0.99 ($M = 0.98$, $SD = 0.01$). The reliability for both the importance and level ratings exceeded the median target coefficient value of 0.80. In fact, all reliability estimates were greater than 0.90. Overall, the results support a very good level of agreement in the occupational analysts’ ratings.

Cycle 20 Interrater Reliability: Across Occupations within Constructs

Another way to evaluate the reliability of the occupational analysts’ ratings is to look at the consistency of the ratings across occupations within constructs. This type of reliability is the extent to which raters agree about the order of and relative distance among occupations on a particular scale for a particular construct. For example, is there consistency across raters in how they differentiate among occupations on the required level of the ability Oral Comprehension? To make this evaluation, McGraw and Wong’s (1996) $ICC(C, k)$ is calculated for each construct on each scale (instead of for each occupation on each scale as described above). Consequently, each of the 52 ability importance scale ratings will have a reliability value. A median $ICC(C, k)$ across the construct ratings for a particular domain on a particular scale of 0.80 or greater is the target interrater reliability for this coefficient (e.g., the median reliability across 52 ability level ratings should be at least 0.80). Again, the value of 0.80 has been judged to be a good rule-of-thumb.

² Although the mean is not a measure of agreement, it can affect the potential range of the SD and SE_M .

This reliability analysis was conducted for abilities on all occupations in Cycles 1 through 20 and results are presented in Table 3. The reliability analyses are based on 2,089 rating targets³. The values in the columns titled *ICC(C,1)* reflect the single rater reliabilities, whereas the values in the columns titled *ICC(C,8)* reflect the reliability for eight raters. Overall for the abilities, the median *ICC(C,8)* across the construct ratings for importance was 0.89 ($M = 0.86$, $SD = 0.10$) and for level was 0.92 ($M = 0.89$, $SD = 0.07$). This indicates that on the whole, the reliabilities achieved the target level. The majority of the abilities had high *ICC(C,8)* reliabilities for both importance and level. In fact, there were 24 abilities with reliabilities greater than 0.90 for the importance ratings and 32 abilities with reliabilities greater than 0.90 for the level ratings (e.g., Spatial Orientation). However, there are some low reliability coefficients to note.

³ A rating target refers to a unique instance of an occupation. An occupation can contribute more than one rating target if it has been rated more than once across data collection cycles.

Note. These *ICC*s indicate how consistently raters rated (rank ordered) occupations on a given ability.
SE = Standard error of measurement = Observed score standard deviation times the square root of one minus *ICC(C,8)*.

The lowest importance *ICC(C,8)* reliabilities were for Selective Attention and Near Vision (0.56 and 0.61, respectively). Time Sharing (0.68) was the only other ability with an *ICC(C,8)* reliability value for importance below 0.70. These three abilities were among those that had importance reliabilities equal to or less than 0.70 in Cycle 19, as well. Several other constructs had importance reliabilities less than 0.80, including Memorization (0.71), Category Flexibility (0.72), Speech Recognition (0.72), Information Ordering (0.72), Speed of Closure (0.72), Flexibility of Closure (0.73), Dynamic Flexibility (0.76), Perceptual Speed (0.77), and Far Vision (0.79). Overall, a total of 12 abilities had importance *ICC(C,8)* values less than 0.80.

The construct with the lowest level reliability was Selective Attention (0.65). Several other constructs also had level reliabilities less than 0.80, including Time Sharing (0.72), Dynamic Flexibility (0.76), Memorization (0.78), Speech Recognition (0.79), and Speed of Closure (0.79). The results for these constructs with the lowest reliabilities are consistent with those in the previous cycles.

Keep in mind that some variation in calculated values is likely to occur by chance. As previously described, the goal was for the *ICC(C,8)* reliabilities to have a median value of 0.80 or greater across constructs, which was achieved for both importance and level (0.89 and 0.92, respectively). These results suggest that there was a very good level of agreement among the raters with respect to the order and relative distance among occupations on particular constructs for importance and level.

Summary

The main findings of the analysis of Cycle 20 analyst ratings were as follows:

- About 77% of the ability ratings were considered important for performance in a given occupation. Constructs that were flagged because the construct was considered not important for performance were very similar to those flagged in previous cycles and conceptually it is understandable that these constructs may be considered not-relevant for the given occupations.
- No importance ratings were flagged based on a SE_M greater than 0.51, and well under 1% of the level ratings were flagged based on a SE_M greater than 0.51.
- There was strong interrater agreement for this cycle as evidenced by the overall low medians of SE_{MS} .
- All within-occupation *ICC* reliabilities were well above the target value of 0.80. These high levels of interrater reliability indicate that the occupational analysts rank ordered the abilities within each occupation similarly on both importance and level.
- The importance and level median across-occupation *ICC* reliabilities were above the target value of 0.80. These high levels of interrater reliability indicate that analysts rank ordered occupations within each ability similarly on both importance and level.

Given these results, it appears that the analysts are calibrated with one another and understand the abilities and associated definitions. Agreement was high and there is clear evidence regarding the high quality of the data. Nevertheless, project staff will continue to review the constructs and data collection process with returning analysts prior to each new cycle and as needed, throughout a cycle. Also, staff will thoroughly train new analysts, if any.

Appendix B

Descriptive Statistics for O*NET Analysis Cycle 20 Importance and Level Ratings by Occupations

Explanation of Column Titles:

- Occupation: SOC code for the occupation – The titles associated with each code are shown in Appendix A. Note that each page contains the results for a single occupation.
- Element Name: Abilities – The name of each of the 52 O*NET abilities. Shaded abilities indicate that two or fewer of the eight analysts rated its importance as 2 or greater and, in turn, the level of that construct is flagged as not relevant.
- Mean* Imp: Mean Importance Rating – The mean rating across eight raters.
- SD* Imp: Standard Deviation of Importance Ratings – The *SD* of the ratings across eight raters.
- SE_M* Imp: Standard Error of the Mean Importance Rating – The *SE_M* of the ratings across eight raters.
- Mean* Level: Mean Level Rating – The mean rating across eight raters.
- SD* Level: Standard Deviation of Level Ratings – The *SD* of the ratings across eight raters.
- SE_M* Level: Standard Error of the Mean Level Rating – The *SE_M* of the ratings across eight raters. Shaded level *SE_Ms* are flagged for insufficient agreement across raters if the *SE_M* is greater than 0.51.

Appendix C

Summary of Cycle 20 Interrater Agreement Indices

Explanation of Column Titles:

Occupation Title: Occupation title – The SOC code associated with each title is shown in Appendix A.

Importance

Mean of M_s Mean of Mean Importance Ratings – The mean of the analyst mean importance rating across the 52 abilities for each occupation.

Median of SD_s Median of the Standard Deviations of Importance Ratings – The median of the SD_s associated with each mean importance rating across the 52 abilities for each occupation.

Median of SE_{M_s} Median of the Standard Error of the Mean Importance Ratings – The median of the SE_{M_s} associated with each mean importance rating across the 52 abilities for each occupation.

Level

Mean of M_s Mean of Mean Level Ratings – The mean of the analyst mean level rating across the 52 abilities for each occupation.

Median of SD_s Median of the Standard Deviations of Level Ratings – The median of the SD_s associated with each mean level rating across the 52 abilities for each occupation.

Median of SE_{M_s} Median of the Standard Error of the Mean Level Ratings – The median of the SE_{M_s} associated with each mean level rating across the 52 abilities for each occupation.

Cycle 20 Interrater Reliability Coefficients

Explanation of Column Titles:

| | |
|-------------|--|
| Occupation: | Occupation title – The SOC code associated with each title is shown in Appendix A. |
| Importance | Reliability coefficient representing consistency of importance ratings across abilities for each occupation. |
| Level | Reliability coefficient representing consistency of level ratings across abilities for each occupation. |
